Recommendation Letter for Dr. Rafał Doniec To Whom It May Concern,

With this letter I would like to confirm that Dr. Rafał Doniec from the Silesian University of Technology visited the Research Group for Medical Informatics and Microsystem Design at the University of Siegen in the time period from July 1 to August 2, 2019.

Having access to the infrastructure and knowledge of the Research Group for Medical Informatics and Microsystem Design, Dr. Doniec further developed the idea of the project towards a sensor-based support system for driving schools.

His scientific vision includes a quantitative assessment of the driving school students' learning progress based exclusively on sensor data recorded by wearables smart glasses. The comprehensive sensor data analysis will be performed in real-time by machine learning algorithms to be developed within this collaborative activity.

At the end of his stay he also participated in 41st International Engineering in Medicine and Biology Conference, in Berlin, from July 23–27, 2019 announced by the IEEE Engineering in Medicine and Biology Society, with paper presentation "Recognition of Basic Driving Scenarios".

Dr. Doniec works in a highly independent way and is able to cope with changing demands in a challenging research environments. He cooperated harmonically with other scientists from the Research Group for Medical Informatics and Microsystem Design. I have been completely satisfied with his achievements and am looking very forward to continue our scientific collaboration.

Dr. Michael G. Wahl
